NPL Site Narrative for Route 561 Dump

ROUTE 561 DUMP Gibbsboro, New Jersey

Federal Register Notice: July 28, 1998

Route 561 Dump is located on a vacant 2.9-acre parcel in a suburban area of Gibbsboro, Camden County, New Jersey. The property is bounded by a strip mall to the north, Clement Lake to the east, Route 561 to the west, and vacant land to the south. The White Sand Branch (and its associated wetlands), which originated at the outlet of Clement Lake, flows south through the site property. The stream, which loses definition as it crosses the property, reforms toward the southern end of the property, and leaves the site through a culvert that extends under Route 561. The site was previously used as a paint waste dump. Operations of the plant, which was not located on the site property, included the manufacturing of varnishes, lacquers, and paints, including dry colors, paste paints, and linseed oil liquid paints.

On February 8, 1994, the New Jersey Department of Environmental Protection (NJDEP) conducted an inspection of the site property, during which a greenish-blue particulate was found buried underneath the ground surface. A blue-green material was also found on the ground surface and in the water of the wetland located on the site property. In June 1994, the NJDEP collected four waste samples from the dump area and three surface water samples from the White Sand Branch. Analysis of these samples indicated the presence of numerous

inorganic constituents.

In August 1995, an EPA contractor collected surface and subsurface soil samples from the site property as well as sediment samples from the White Sand Branch. Analysis of these samples indicated the presence of inorganic contaminants in the on-site soil and downstream sediment samples. Therefore, Level I contamination of 0.13 mile of wetland frontage, as well as Level I contamination of a classified stream, was documented based on the NJDEP and EPA sampling events.

[The description of the site (release) is based on information available at the time the site was evaulated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See <u>56 FR 5600</u>, February 11, 1991, or subsequent FR notices.]

For more information about the hazardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry (ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at http://www.atsdr.cdc.gov/toxfaq.html or by telephone at 1-888-422-8737.
